

**Safety Stuff That Matters!**  
**OSHA Safety + Infection Control Review**

While rewarding. Providing oral healthcare is not without risk. Would you change your view of safety measures if you could see the invisible risks? This presentation will provide a peek into cross-contamination both during and after patient care. Strategies will be shared to ensure worker and patient safety because this is *safety stuff that matters!*

During this session, we will:

- Recall signs, symptoms, and mode of transmission of HIV, Hepatitis B, and Hepatitis C.
- Discuss the risks of exposure specific to bloodborne pathogens and prevention methods.
- Discuss updates to the Hazard Communication standard to align with GHS as it relates to labels, pictograms, and SDS.
- Discuss basic infection control principles applicable to dental practices, including surface disinfection and respiratory hygiene.
- Recall four (4) critical steps in instrument processing.

NOTE: This session will meet the annual Bloodborne Pathogen training requirement and the annual infection control training requirement for South Carolina.
